

Sparrow DAST

A Smart & Secure DevSecOps

Sparrow DAST (Dynamic Application Security Testing) detects security vulnerabilities with more than 1,400 web application checkers. It also delivers IAST (Interactive Application Security Testing) by scanning web applications with Truescan agent (an RASP module). Moreover, Sparrow DAST enables you to schedule a testing plan for a project to save your time.

Extended Coverage

Web applications using HTML5 or Ajax can be checked. Sparrow DAST calculates possible threat routes with more than 1,400 web application checkers.

Practical Management Options

To save testing time, Sparrow DAST performs an integrity test with ReCheck option to save testing time. It also provides Event Clipboard to record and replay analysis information for detecting and sharing the exact events. All features can be accessed on a web browser.

On-Premise and Cloud

Sparrow DAST is available as on-premise and cloud. Customers can choose between them based on their application development environments.

Automative Tool

Just enter a URL, then, Sparrow DAST will automatically collect sub-paths to check web application security vulnerabilities. It allows you to make a schedule for a security test on a project.
